

Experienced

Senior Engineer Quality Control STI-IND

Gujarat, India

A detail-oriented **Senior Engineer** with strong expertise in **Quality Assurance Lab operations** within the automobile industry. Skilled in **automotive testing, validation, material analysis,** and **regulatory compliance,** I ensure **product reliability** and alignment with global quality standards. Experienced in **optimizing lab processes, leading test activities,** and collaborating with **cross-functional teams** to drive **continuous improvement.** Known for **analytical problem-solving, precision,** and a commitment to delivering **high-performance, zero-defect automotive products.**

What you'll do

- As a Senior Engineer – QA Lab, I lead automotive component testing, ensuring compliance with global quality standards. I manage material analysis, performance validation, and durability testing while optimizing lab workflows for accuracy and efficiency. I conduct root-cause analysis, implement corrective actions, and collaborate with cross-functional teams to resolve quality issues. I prepare detailed technical reports, maintain test equipment integrity, and drive continuous improvement to achieve zero-defect product quality.

What we are looking for

- A dedicated Senior Engineer – QA Lab with proven expertise in automotive testing, validation, and material analysis. I specialize in ensuring product reliability, regulatory compliance, and alignment with global quality standards. Experienced in optimizing lab operations, leading critical test activities, and driving root-cause analysis for quality improvement. Known for precision, analytical thinking, and a commitment to delivering high-performance, zero-defect automotive components through collaboration with cross-functional engineering and manufacturing teams.
